

**It's
in our
nature.**

AGROMILLORA

Improvement is in our nature

At Agromillora we know how to see inside things. Starting with ourselves. Similarly, we know how to see the potential inside nature.

We are Agromillora, a global leader in the nursery sector and a pioneer in the production and marketing of woody trees (stone fruit trees, olive trees, berries, citrus, nuts, among others) boasting the highest genetic quality standards.

At Agromillora there are already over 1.500 people who share a passion for agriculture. Over 30 years' experience have made us the pioneers and leaders in the micropropagation sector, with a unique position in the market.

This leadership is the result of two factors: an innovative, highly technical production system and a global network, thanks to which we have become the number one provider of plant propagation services for the agricultural industry.

We are strongly committed to the development of global agriculture to which we contribute value through improvements in productivity. We promote the creation of more productive, healthier and resistant plants and we work to implement new agronomic solutions, such as the techniques of Super High Density, new pruning systems or conduction systems for plants. All of these systems are much more efficient and profitable for growers.

Because cooperation and a desire to help our clients to continue growing are also in our nature.

Innovation is also part of our daily life. The introduction of the super high density olive model 30 years ago was a paradigm shift in the agricultural sector.

Our global presence, with 11 subsidiaries and 10 labs worldwide and being active in 25 different markets, is not only one of our greatest strengths, it is what sets us apart from our competitors. We have a global vision and experience through which we have acquired in-depth knowledge of the sector and which we put at the service of our clients.

32 YEARS OF EXPERIENCE **5** CONTINENTS **25** COUNTRIES **11** SUBSIDIARIES **10** LABS

Innovation is transformative

What has transformed Agromillora into a pioneering company and world leader in the nursery sector is its strong commitment to innovation. Improvement, progress, evolution, all born of our desire to find new formulas, new products and new systems that nowadays drive the performance and growth of agriculture all over the world.

We innovate constantly for our clients, guaranteeing a massive production of the highest quality. Our commitment to innovation can be seen in:

- The format of Smarttree plants, which has meant a paradigm shift by revolutionizing the super-density system. With Smarttree we achieve total mechanization from the moment of planting, thereby greatly increasing the efficiency and profitability of crops.
- The development of new agronomic solutions such as the super high density applied to new species, which has meant a paradigm shift for the fruit sector.
- As a world leader in in-vitro micropropagation, we constantly take on projects of multiplication of new species worldwide thanks to the strategic relationships we maintain with breeders.
- Our commitment to the digitalization of the production process using the QR code system that guarantees the traceability of our products.
- Professionalized management of the mother-plant fields, to ensure the genetic and sanitary quality of our plant material.

At Agromillora we provide plants adapted to meet the demands for innovation and technology and health of the fruit sector.

ROOTPAC®

And other rootstocks with great compatibility, strength and resistances.

MICROGRAFT®

Transplants of fruit trees. We work with leading worldwide plant breeders. We can multiply any vegetable material thanks to the relationship with the main breeders and our global structure.

SMARTTREE®

A super-intensive format. This makes it possible to maximize the profitability of crops and improve product quality.

VCR®

A world leader in vine plants with over 4,000 available combinations.

PRODUCTS

At Agromillora we put all our know-how and our highly- advanced technology at the service of nursery production processes. We provide everything to guarantee the quality of our plants.

Quality Assurance & Research
Agromillora

“We anticipate possible health threats and the proliferation of emerging diseases by implementing all the necessary controls to ensure the health and genetic authenticity of our plant material, and we also do this all over the world.”

Quality Assurance is presented as a fundamental pillar in guaranteeing the production of healthy plants for our customers and consolidating the leadership of Agromillora in the nursery business.

QA represents our commitment to the genetic and health quality of our plants and certifies that they have gone through the most exhaustive procedures, measures and policies in the sector.

The Quality Assurance of Agromillora aims to neutralize emerging health threats such as new bacterial diseases by implementing quality policies and strict control protocols in all our production centers.

The QA policies ensure:

- A genetic and sanitary guarantee by using the most advanced techniques.
- Morphological guarantees by using a special production process.

SUPER HIGH DENSITY

Agromillora has revolutionized the agricultural sector worldwide, by promoting new agricultural techniques that are more efficient and profitable for growers, such as super high density in olives. Super High Density crops were conceived to solve some of the recurring problems that we find in traditional crops. At present, there are over 300,000 ha of super high density olive orchards planted all over the world.

- Its benefits include:
- Increased productivity.
 - Total mechanization of crop works.
 - Early entrance of production.
 - Mechanical harvest.
